Helmholtz Institute Ulm (HIU) for Electrochemical Energy Storage

The Karlsruhe Institute of Technology (KIT) is the institution that founded – in cooperation with the Ulm University – and which supervises the Helmholtz Institute Ulm for Electrochemical Energy Storage (HIU). Associated partners of KIT and the Ulm University are the German Aerospace Center (DLR) and the Center for Solar Energy and Hydrogen Research Baden-Württemberg (ZSW).

- HIU combines the expertise of these four partners in the pursuit of application-oriented basic research that it sees as the basis for the development of advanced battery systems.
- At HIU, the scientific bases are being created and improved for developing the means to store electrochemical energy for mobile and stationary applications. HIU covers all the fields of basic research on batteries and provides a bridge up to the system level.
- The areas of research are: basic research in electrochemistry, materials research, theory and modeling of (electro)chemical processes, system considerations and analytic methods. Individual research activities will be bundled by establishing shared cross-sectorial projects:

HIU is located on the campus of the University of Ulm and is a part of the Helmholtz Association of German Research Centers.

Building Intelligently

Saving Energy

150 Years
Science For A Better Life

Children have dreams that can come true. At Bayer, we have visions that we do our utmost to fulfil.

As one of the world's leading producers of high-quality polymer materials, Bayer MaterialScience offers intelligent solutions for energy-efficient construction in all the world's climate zones. High-performance insulating materials made of polyurethane ensure that roofs, ceilings, walls and floors are insulated effectively. This reduces the energy consumption of buildings significantly.

Together with our partners, we bring our visions of energy-saving construction to life – for the sake of climate protection, and for the generations of tomorrow. www.bayer.com
